Block Rear A/C Lines with New 8mm, 15mm and Combination SAE/Metric Line Terminator Assortment Kits from AirSept

Atlanta, GA (April, 2013) – Automotive service providers can now help those customers that don't want to spend hundreds of dollars to repair their failed rear air conditioning unit. AirSept's Line Terminator kits allow shops to block off the line where it splits to go to the rear evaporator. The repair takes no more than five minutes and can be done without removing the line.

Technicians can install the unit under the hood at the front system "Y". AirSept's new Line Terminator creates an effective, permanent block on the line, eliminates refrigerant and oil pooling in the rear A/C line and helps maximize front A/C performance

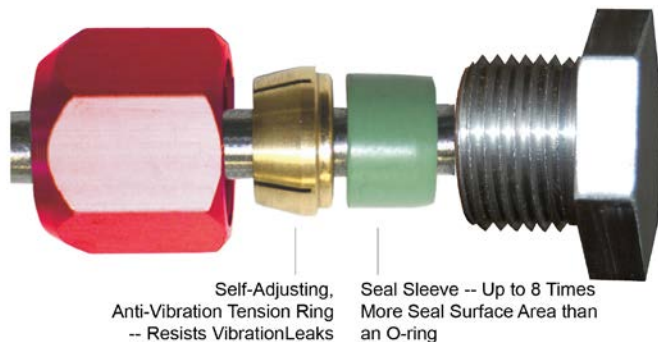

New to the Line Terminator family are kits for blocking 8mm and 15mm OD lines, plus a new SAE/Metric assortment kit containing one each sizes for 5/16", 3/8", 1/2", 5/8", and 3/4" OD lines, plus one each sizes for 8mm, 10mm, 12mm, 15mm, and 16mm OD lines.

A state-of-the-art sealing sleeve is up to 8 times wider than a standard o-ring. It seals against irregular tubing surfaces, preventing leak "travel" that can defeat narrow o-ring seals.

The wider sleeve also helps resist vibration that creates leaks. A slotted tension ring coupled with a tapered nut guarantees a tight grip on the tubing.

The Line Terminator works on aluminum or steel lines. Install it with an open end wrench -- no costly crimping tools required.

AirSept is a Tier 1 or Tier 2 supplier to 16 OEMs. Visit our website at www.airsept.com or call AirSept at 1-800-999-1051 or 678-987-0500 for more information.
